You have done an excellent Job with the dashboard bro. I have a few suggestions, you might have a better way of implementing them.

1) When today is selected book value should be displayed also. Because book value will change everyday

1.1) Depreciation should be available when today, this Month or this year is select. Book Value will remain the same when this year, all time, today or this month is selected. It is important to have book value and depreciation in all of the time frames.

1.2) All of these items should be links. If i click on Asset Expense, Asset Sale, Asset Disposal, Depreciation, Book Value etc, I should then select department, donor, station, region etc and it should give me the book value, Depreciation, disposal, Reparit Activity etc for the select Link for All Time, Today, This month or this year.

1.3)Two equations are very important. **Book** Value and **Depreciation.**

Book Value. Book Value for today should be a total of all the book values of all the items for all time. Book value for this month or this year will remain the same.

If book Value link is selected, book value for today will be displayed, but date options will be different for book which. It should give you an option to know the book value of asset in the future. Note that book value is cost of assets - consumed depreciation (amount). So if you select a feature date, it means that by that date Depreciation would have increased while book value will reduce. So when you take depreciation for this year, you are looking at how much amount has gone for depreciation (Consumed), but with book value you want to know how much your assets will be worth in one months time.

1.4) **Depreciation:** for today will show how much has been consumed (amount for today) and This Week, this month, this year, will show how much has been consumed for that period of time. These are very important.

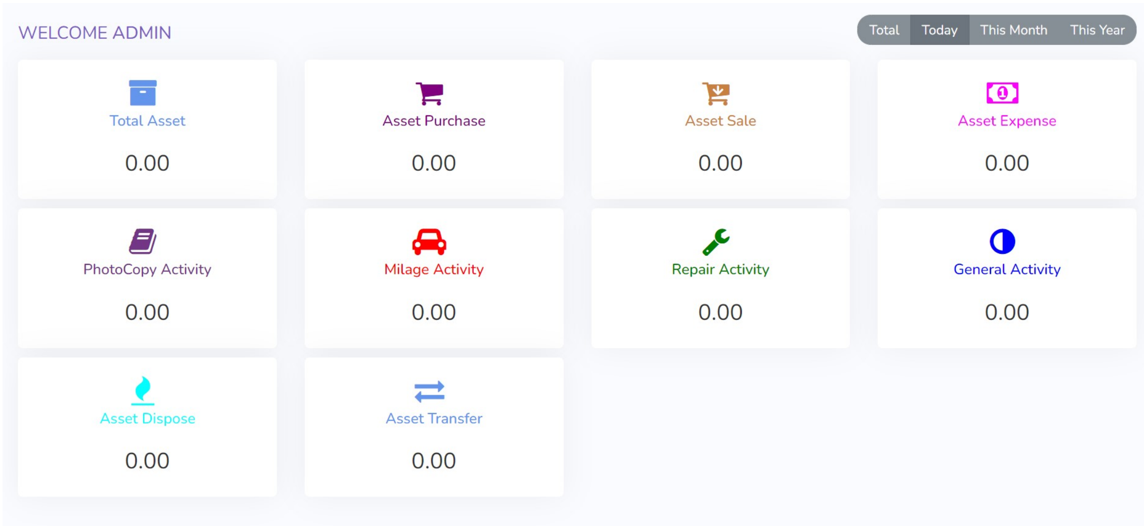
IF i also click on depreciation Link, it should select Department, Donor, Region etc so know how much as been consumed for that department, region etc.

* We can add sales, by day by month, year also.

Why is this important

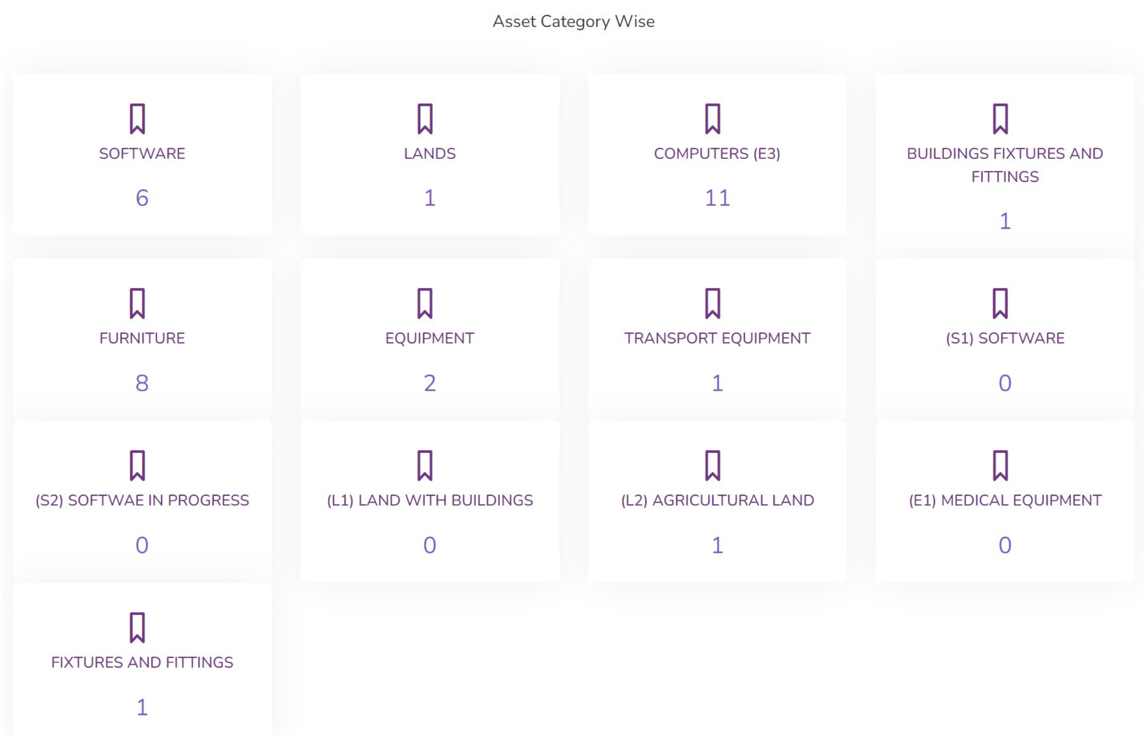
- Depreciation (Consumed Amount) is always considered as expenses, so you may want to know how much you have lost of a period of time, per department, region donor etc

- A company might want to know how much worth the assets will be in two years time (Book Value) per Department, Region, etc.



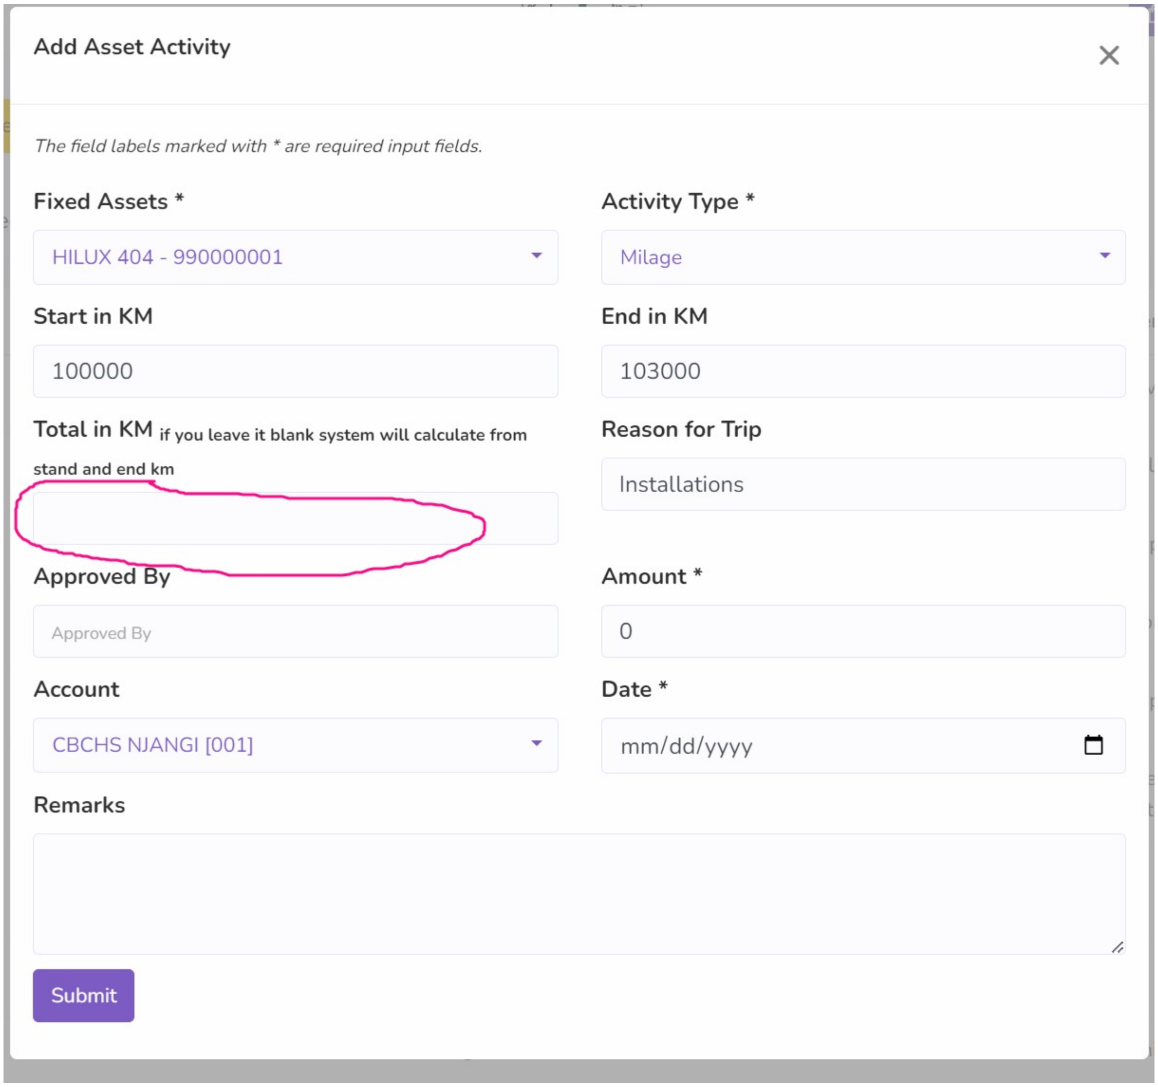
2) It is better to show the book value of these asset types and not the quantity

2.1) The Categories below should indicat the number and Amount for Software, Lands, computers (E3) etc. If i click on any of the categories, I should then select Department, Station, Donor, Region etc to see the worth of Lands, Sofware for the specified Department or Region.

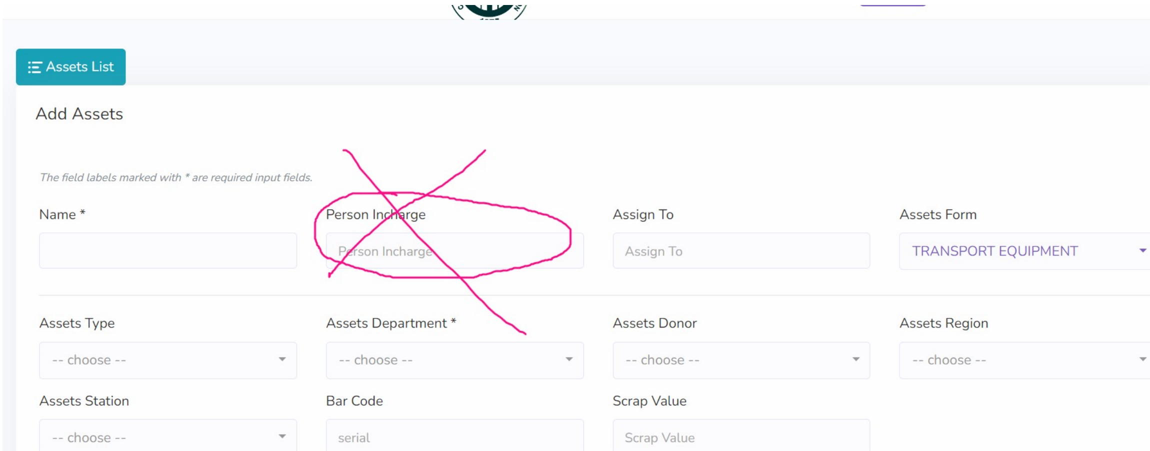


3) Assets Types above do not have icons. The icons do not reflect their category.

4) For Milage, once start and end KM is entered, system should automatically calculate, but if just the total is known, Start and end KM should be allowed blank.



5) It is important to introduce Commas where ever we have figures atleast for Fixed Assets that we are still developing. It is very difficult to read values without commas.
6) In Asset registration, Person incharge and assigned to are the same. Let us remove Person incharge



6) Transfers still has a problem. During transfer Useful life should be the remaining days or years for the asset. If i bought a transport asset with 5 years of useful life. After using for 1 year, during transfer, the useful life should not become 4 years even to the new department. Currently when i do transfer usuful life for this asset is instead 5 years meanwhile the asset has already been used for one year. This is a problem becuase if use an asset for 4 years and transfer it, the useful life in the new department still shows 5 yeras and its like a new asset. During transfer the right useful life is display, but in the new department the wrong one is registered. Please check.

7) Under Transfer, Disposal, Sales List When i click on action and edit, it takes me to Edit Asset Registration and not edit asset transfer. It should take me to edit transfer so that i can cancel transfer.

	Barcode	Image	Name	Price	Transfer Price	Transfer Date	Useful Life	Purchase Date	Service Date	Action
	990000001	No Image	HILUX 404	12000000	11309589	2023-04-16	5 Y	2023-01-01	2023-01-01	Action
	4050000005	No Image	OFFICE DESK A	60000	58544	2023-04-07	7 Y	2023-02-01	2023-02-04	Action
	4750000001	No Image	DENTAL CHAIR	4000000	3138630	2023-04-06	5 Y	2022-03-10	2022-03-10	Action
	1030000006	No Image	FIXED ASSETS SOFTWARE	4000000	3964932	2023-04-07	5 Y	2023-03-22	2023-03-22	Action

8) When assets are transfered the status does not show in assets list. It is good to introduce a status comlumn so that we can know if asset is transfered, sold or disposed.

9) During Sales, what should be displayed should be Useful Life remaining. Through out the software remember that USEFUL LIFE IS = CONSUMED (DAYS) - USEFUL LIFE DURING REGISTRATION. As consumed increases useful life decreases. So during asset transfer, sales, disposals the stated useful life should be the Useful life remaining.

9) SALES CERTIFICATE

Sale Certificate

I, The Undersigned ____admin____

Holder Of Nationality Card No, ______________________________

Issued At ____________________ On ________________________

Address __________________________

Have Agreed By This Certificate As Having Sold (___________) Of Mark

____

Name. ___sale Test___ Registration No. ___1010000004___

Chesis No. __________________ Price ___1000____

Name. ___sale 2 Test___ Registration No. ___6300000001___

Chesis No. __________________ Price ___885____

To Mr./Mrs./Ms. ___admin____

Holder Of Nationality Card No, ___1234567891234____

Issued At ___2022-12-13____ On ________________________

Address ______

The Said (_________) Is Sold At (Figures): ___1118___

(Words): One Thousand One Hundred And Eighteen

10) Should be adjusted to fit in a single page
11) No Need for another logo if header and footer are present
12) In the sales form should have Buyer / Seller details with the following information instead

- Name,
- ID Card No
- Issued AT
- On
- Address
- Phone No:

- Email Address:
- Mr./Mrs/Dr.Prof/Chief/Engr./Others

13) The sales Certicate should then Capture the asset Details like
14) Barcode, Sales Amount, (Personal details like Chassi number, Matricule number of RAM, HDD etc) Depending on the kind of asset.

EXAMPLE OF A SALES CERTIFCATE

I, the undersigned Name, Holder of National ID_______Issued at_______ on the ______have agreed by this certificate as having sold
- Asset Name, Barcode, (Other Personal Details for different asset types like RAM, HDD, OS for computers and different details for Cars, or furniture from Assets List)

TO (BUYER DETAILS)

Mr./Mrs./Dr.etc Buyer's Name, Holder of national ID Card No,__________Issued At___________ On_________ Address___________Email_________Phone____________.

The Said_____________ (Asset Name with Barcode) is sold at (Amount in Figures with commas), Words: (Amount in Words)

________________________________ ________________________________
Seller's Signature Buyer's Signature

________________________________ ________________________________
Seller's Witness Buyer's Witness

General Barcode and QR Code at the Bottom which should be the SAles Certificate Reference

15) It is important to note that "Add Sales" Form now has to incluse Name, ID, Issued At, on, Address, Phone, email, title (can be a drop down) for bother buy and seller.

16) All of this information is not necessary in the Sales List table, but it will be captured in the Sales Certificate.

17) PERMISSIONS:
I have not tested the various permissions, but permissions seems to be probably implemented. I think if it is possible to instroduce a Column header where fixed assets begin that will be nice. so that as we do Rentals / Booking it will be possible to quickly identify a module

18) Can we introduce permission for dashboard of POS?
19) Can there be permission for disable individual menus?
20) Can we also do a transfer and a disposal certificate that should be similar to the sales certificate.

Once again thank you very much for the work you are doing bro. The reason i am making these minor details is so that if someone is coming up with somethign semilary, it will be impossible to match what we have done. We must make work so easy for the user that they wi ll find it very difficult to corp without POS.
